

Information Security Studio

Key Value:

Aligning business, compliance, and risk management with information security programs that fit your operational needs via offering proper cost-effectiveness balance, qualified professionals, and the speed of implementation.

Business challenges We solve

1. ALIGNING BUSINESS AND SECURITY VIA GOVERNANCE

Challenge: The lack of understanding when it comes to the role of Information Security and Compliance leads to reputational impact, data loss/breaches, damage recovery expenses, loss of customers, and even loss of business.

Solution: Tailored Governance programs that enable you to effectively govern security and compliance within your business model, while also utilizing them to accelerate stable growth.

2. ENSURING COMPLIANCE WITH REGULATORY REQUIREMENTS

Challenge: The inability to comply with various Compliance regulations and industry standards (GDPR, HIPAA, PCI DSS, etc.) and other local applicable laws (e.g., labor, privacy laws) makes it difficult not only to navigate them but also to translate them into specific Governance practices.

Solution: In-depth knowledge and practical implementation of Compliance controls to ensure you meet industry and regulatory compliance 24/7, eliminating the risk of financial penalties and reputational and legal backfire due to inefficient Governance.

3. APPLYING COHESIVE RISK MANAGEMENT

Challenge: The lack of a tailored Risk Management program creates financial and reputational consequences of responding to materialized threats such as cyberattacks, data breaches, and regulatory compliance issues.

Solution: Extensive expertise in applying preventive Risk Management strategies, where compliance, security, and even business threats are proactively identified and dealt with in a sustainable, cost-effective manner.

4. DEVELOPING STRUCTURED INFORMATION SECURITY AND COMPLIANCE PROGRAM

Challenge: Insufficient knowledge and experience may lead to a Program that crumbles at the launch, becomes cumbersome for users, lacks business relevance, wastes time and budget, and simply fails to protect your business.

Solution: Proven practical experience in designing and implementing a Program which, at a granular level (controls, policies, procedures), reasonably reflects your business model, security and regulatory compliance, risk management, and customers' expectations.

5. STRENGTHENING CYBERSECURITY

Challenge: The inability to comprehend and assess the landscape of your assets, data, threats, weaknesses, malicious actors' behaviors, makes the design of protective measures inefficient and expensive.

Solution: Proper comprehension and alignment of cybersecurity measures to your business model, compliance requirements and risks, including – antimalware, vulnerability, access, endpoints, incidents management, cloud and network infrastructure security, application security, and others.

6. FOSTERING SECURITY AND COMPLIANCE AWARENESS

Challenge: The absence of understanding that a Human is the weakest link in your information security chain and the lack of a robust Information Security awareness program hinder the success and effectiveness of your Information Security and Compliance framework.

Solution: Modern and targeted awareness programs, which significantly decrease the risks that lead to financial and reputational losses (phishing and social engineering attacks, vulnerable systems, data leaks, human errors, unauthorized access, and more).

Our Main Service Areas

Governance, Risk Management, Compliance

- Assess information security and regulatory compliance requirements relevant to your company
- Adjust the role of information security and compliance within your business model
- Design/improve a reasonable Governance strategy
- Conduct compliance assessment against standards and regulations (ISO 27001, SOC2, GDPR, etc.)

Risk Management and Data Protection Impact Assessments

- Design a Risk Management Program
- Assess Information Security, Cybersecurity, and Compliance risks
- Design reasonable risk treatment plans
- Conduct Data Protection Impact Assessment
- Implement Data Protection measures
- Assess supply chain compliance

Information Security and Compliance Program

- Assess your existing Information Security and Compliance Program
- Design/improve the Program based on Governance, Risks and Compliance requirements
- Implement/adjust components of the Program, i.e. policies, procedures, technical and administrative controls
- Design/conduct Information Security Awareness programs

Information Security Services

- Virtual CISO as a Service
- Security Analysis as a Service
- Data Governance as a Service
- Secure IT infrastructure management services: Identity and access management (IAM), vulnerability management, accounts review, end points management, etc.
- Information security controls/tools: Implementation, monitoring, improvement
- IT infrastructure and security costs optimization

Cloud Infrastructure and Network Security

- Assess/improve cloud and network security solutions
- Design/implement cloud and network security architecture

Application Security

- Assess Secure SDLC
- Assess Application security
- Design/improve Secure SDLC and Application security
- Conduct penetration testing

Benefits You Get with TEAM's Information Security Studio

Tailored Solutions

Reduce risks with secure workflows and custom governance programs for all organizational levels.

Proactive Defense

Hit threats before they strike with business aligned solutions to manage your security cost-effectively.

Security Assessments

Assess your security and compliance posture, as well as numerous security controls.

Experienced Team

Entrust your security management to experts with qualifications proved by numerous certifications (CISSP, Microsoft, Fortinet, PCI-DSS, GDPR, etc.)

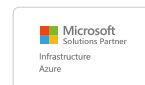

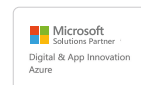

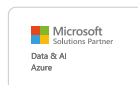

Cost-Effectiveness

Opt for an uninterrupted delivery of custom solutions that will prove to you that security is no longer a burden – it's easy and affordable when done by professionals.

Proven Frameworks

Utilize our experience within the recognized frameworks that include ISO 27001, GDPR, PCI-DSS, SOC2, business continuity, cloud systems (Azure, AWS, GCP), MDM, Security operations, and others.
